Other Greenhouse Gases

Important Phenomenon

Carbon Footprint

Impact that one's activities have on Carbon emissions.

Carbon Bomb

Projects that are likely to emit over a gigaton of CO₂ over their lifetime.

Carbon Sensitivity

Sensitivity of the earth's climate to changes in carbon dioxide

Climate Feedback

Earth's climate either amplifying (positive) or dampening (negative) the effects of an initial carbon forcing.

Ice albedo, permafrost, water vapour : positive feedback.

Clouds and Climate Change

High clouds trap terrestrial heat.

Low cloud reflect sunlight.

Carbon fertilisation

Greening due to increased CO₂ (temporary)

Climate Tipping points : 9 irreversible points of change

Impacts of Global Warming

- Marine Heat Waves
- Coral Bleaching
- Weather Patterns change
- Severe Cyclones
- Urban Heat islands
- Increased Wildfires
- Shrinking Cryosphere
- Arctic Amplification
- Zombie ice melting
- Sea Level Changes (eustatic)
- Coastal Flooding SIDS : barbados plan of action and mauritius strategy
- Deterioration of carbon sinks (tundra)
- Climate Migrants
- Economic Losses
- Social Cost of Carbon
- Oxygen Deoxygenation.
